

Technical Data Sheet

ASO[®]-FF INDU-FibreFiller **Thixotropic material**

Art.-No. 2 06410

ASO-FF can be used to thicken and improve the thixotropy of all solvent free ASODUR coatings. The addition of ASO-FF controls the slip and flow properties so that non-slip smoothing mortars for vertical or strongly sloping surfaces can be produced on site.

Technical Data:

Packaging: 2 kg bag and 10 kg sack
Storage: cool and dry, 36 months above +10°
C in the original unopened packaging.
Use opened containers promptly.

Application:

ASO-FF is supplied in a ready to use powder form. ASO-FF can be mixed into the coating material (best into the resin component) with a suitable rotating mixer with paddle (rapid stirrer). Ensure an even lump free preparation. The addition rate lies between 0.5 up to a maximum of 5% by weight and is dependent on the thickness to be applied and the degree of fall on the substrate to be coated.
